### Synergy OK Masts Update

To date we have built 5 OK masts and are about to start building a new batch. We have been very happy with the bend characteristics we have achieved to date but will be further refining the masts this autumn with a view to having three standard masts available to buy this coming winter. The masts will come available as a soft, medium and stiff section.

The intention of the 2015 development is to very slightly stiffen our fore-aft bend above the deck and increase the bend slightly below deck level. We believe that we can improve the transition and balance of the rig between sailing upwind and downwind making for a very competitive rig.

All our masts are built using High Modulus pre-preg Carbon fibre with a carbon sail track which both works to stiffen the mast above deck level and ensures that the sail track cannot "peel off" the mast tube. They also look amazing with their full carbon weave finish. We supply our masts fully rigged with halyard, halyard lock, halyard tidy, boom bolt and lead correctors.

Anyone interested in a new mast for 2015 please contact Simon now on +44 (0) 1473 809298 or [simon@synergymarine.co.uk](mailto:simon@synergymarine.co.uk).

### About Synergy Marine

Synergy Marine was founded in January 2010 by OK and Lark sailor, Simon Cox, as a boat building and repair centre on the East Coast of England. The business has CNC router facilities for manufacture of parts including moulds, rudders and centreboards for all sailing dinghy classes. We work with wood, glass fibre and carbon composites. We have produced championship winning dinghies and parts for multiple classes every year that we have been operating.
